DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Invention I in the election filed on April 16, 2004 is acknowledged. The traversal is on the ground(s) that the processor means performs the step of "storing" data and "instructing" each control circuit. This is not found persuasive because although a processor means can accomplish those functions, performing such functions/steps is not limited to or by a processor means. Storing data only implies a data storage device. A device other than a processor means, such as a switch, can accomplish instructing.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 22-30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the election filed on April 16, 2004.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "instruction buffer" recited in claims 5 and 16; and the "removable portion" recited in claim 14 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Art Unit: 3752

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claim 14 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not teach an associated memory which includes a "removable" portion.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 6 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 recites the limitation "each additive fluid" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 3752

Claim 17 recites the limitation "each additive fluid" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by McNabb (5,927,603).

McNabb discloses a system comprising:

a control apparatus:

processor means and associated memory 44, 46;

a plurality of control circuits 33;

at least one fluid control device (sprinkler operated by solenoid 33);

a position determining device 49;

additive fluid (chemicals, column 10, line 46);

sensor means 14, 06;

transponder means and receiver means (communication system between computer 44 and home base 28, column 9, lines 17-25);

a weather station (column 13, line 3);

a computer system 28.
